Evetric

State-of-the-art universal nanohybrid composite

- High-end universal nanohybrid composite resin
- Different degrees of translucency of the dentin and enamel shades for very natural-looking restorations of both posterior and anterior teeth
- Available in 10 shades

Invisible fillings for highly esthetic results

- Integrated nano pigments for an exceptional chameleon effect
- Homogeneously distributed pigments for shades with an intensive effect

Benefits for you

Improved shade blend with the surrounding natural dentition

Benefits for your patients

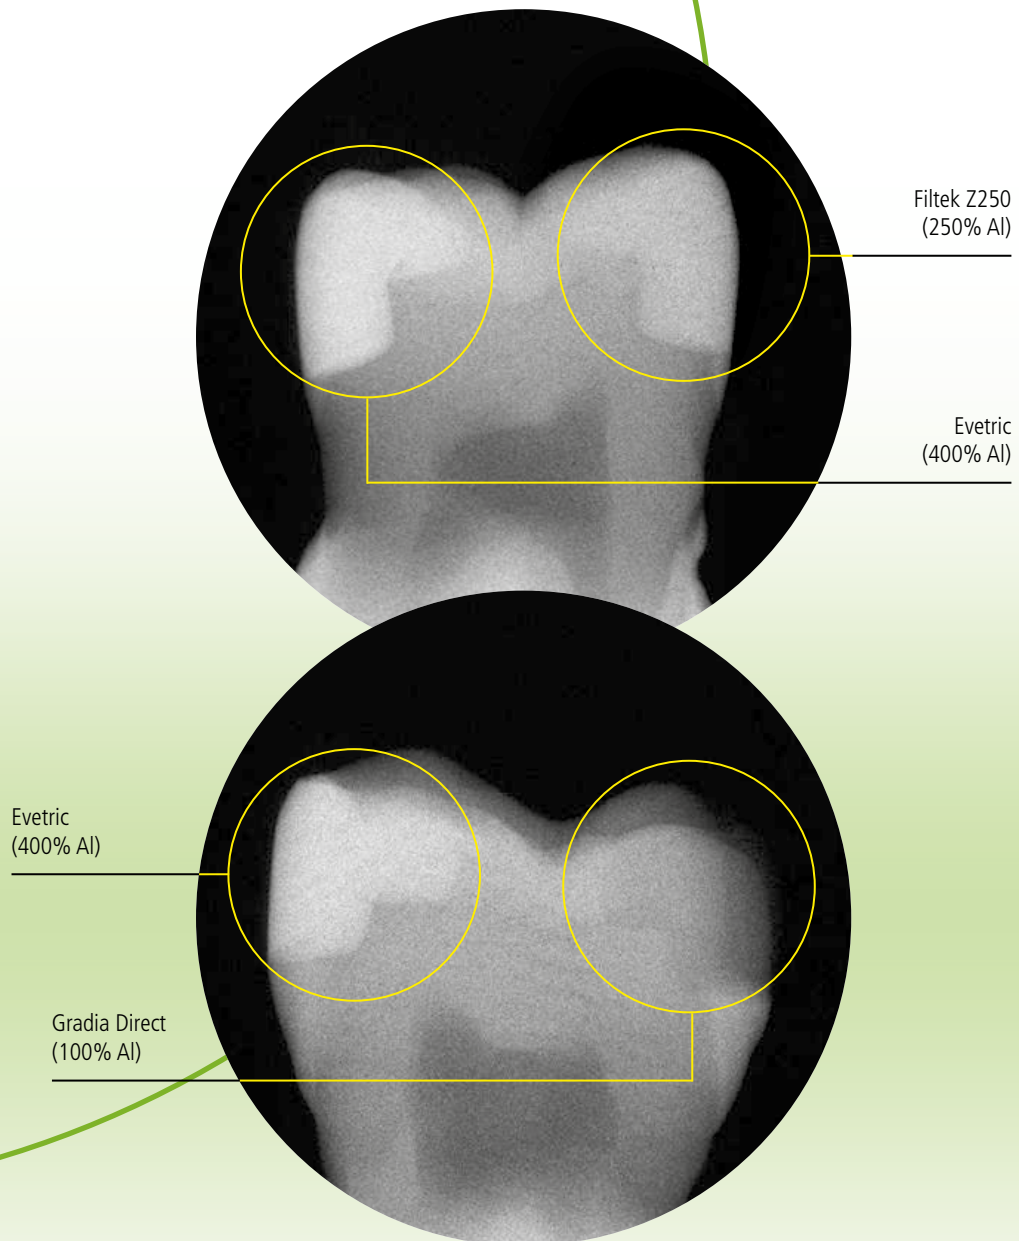

Fillings that look like the natural tooth structure and are therefore almost invisible

Prof. Dr Vlatko Pandurić, University of Zagreb, Croatia

“ Evetric provides
excellent shade
adaptation ”

Visible if clinically necessary

- Use of a functional filler for an outstanding radiopacity of 400% Al

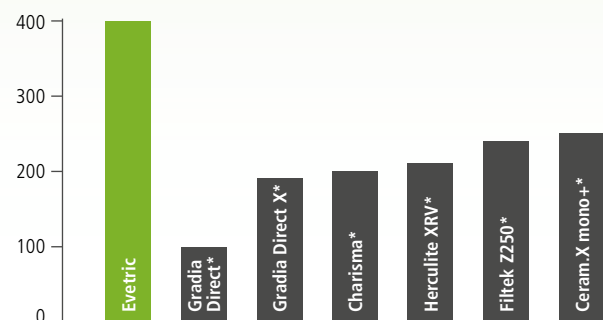

Benefits for you

The composite resin is clearly distinguishable on X-rays to help you in your diagnosis.

Benefits for your patients

Unnecessary drilling can be avoided by reliably identifying restorations in future examinations.

Radiopacity [Al %]

Measurement acc. to ISO 4049, R&D Ivoclar Vivadent AG, Report April 2014

Advanced technology makes work easier

- Integrated nano-modifier for excellent modelling and non-stick properties
- Long working time due to the composite’s reduced sensitivity to light

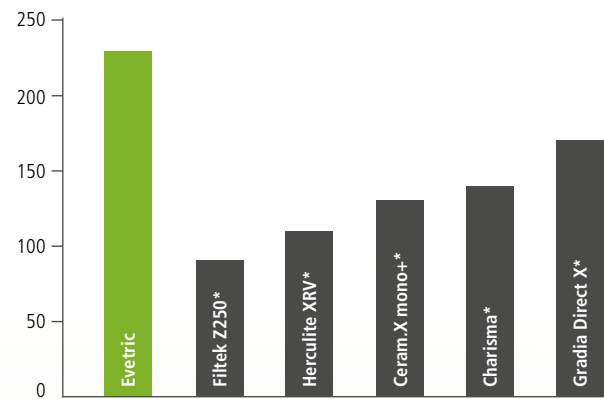

Benefits for you

Modelling without time pressure enables you to produce high-precision esthetic outcomes.

Benefits for your patients

Excellent results and a natural-looking smile

Sensitivity to ambient light [s]
